Shouldn't see nav components before you login
Registration page should not have nav as well

Home page should not be a dashboard, too much clutter
Should have 1,2,3 buttons max to create ideas, view ideas, rate ideas, etc.
     Everything else can be found using the nav

Overall it's too engineered - i.e. Pied Piper

Lots of empty, blank space throughout the website

Too many graphs, will most likely cut them

Too many tabs that are under construction, too many tabs in general, we need to trim the fat

Top scored Team Ideas get rid of the PDCA (PDEA) and have them displayed when you click into the idea

Get rid of downvotes, you can either thumb up or ignore an idea. Most thumbed up ideas at the top of the page, whole numbers

Giant black arrows on Idea page needs to go

No tracking, no subscribing, etc

Make two roles, user and manager.
     User can make ideas, view and vote on ideas
     Manager has all the admin 'tools' adopting ideas, viewing PDCA, etc

Create Idea will be in the Nav, no matter where you are in the webapp you can always create an idea
     When you create an idea, you will be routed to a separate page

Admin panel is out of scope, can add, but not really necessary for MVP
